SKILLS

TECHNICAL

- ▶ UI/UX Design & Figma
- ▶ Product Design & Prototyping
- ▶ LLM & Agentic AI Systems
- ▶ Python, FastAPI, Django, DRF
- ▶ REST API Design & WebSockets
- ▶ PostgreSQL, Supabase, SQLite
- ▶ Docker, Git/GitHub
- ▶ Team Leadership & Coordination

EDUCATION

Expected 06/2029

B.Tech, Computer Science Engineering

Alliance University, Bengaluru

LANGUAGES

English ●●●●○

Tamil ●●●●○

SUMMARY

AI Product Engineer and UI/UX Designer with hands-on experience building AI-powered products end-to-end — from Figma-based interface design and human-centered UX to LLM agent workflows and production Python backends. Second-year Computer Science Engineering student (Alliance University, Bengaluru). Shipped four independent Python projects spanning LLM-integrated backends, REST API design, and real-time data pipelines, including a real-time AI backend built on a parallel multi-expert routing architecture. Founder and Core Team Lead of Hey Horizon, driving product vision, AI workflow design, API architecture, and UX design for a cross-functional team.

WORK EXPERIENCE

Founder & Core Team Lead — Hey Horizon

- Own end-to-end product vision, technical architecture, AI workflows, APIs, and UI/UX design for a cross-functional engineering team, from Figma interface design through backend implementation.
- Founded and lead a cross-functional core team, scoping projects and assigning technical tasks across contributors.
- Built Python tooling for web scraping, REST API integration, and JSON/CSV/SQL data-cleaning pipelines.

Tech: Python, Figma, UI/UX Design, Web Scraping, REST APIs, SQL, Data Pipelines

Python Backend Developer — FastAPI Backend — Tecnvirons-realtime-backend (Personal Project)

- Engineered a production-ready FastAPI backend with WebSocket streaming, delivering token-by-token LLM responses through a parallel multi-expert routing architecture, with sub-100ms first-token latency.
- Implemented autonomous LLM tool-calling (Groq, OpenAI) for live data lookups, with full event logging and auto-generated session summaries persisted to Supabase PostgreSQL.
- Scaled the service to support 50+ concurrent WebSocket connections and containerized it with Docker for cloud deployment.

Tech: Python, FastAPI, WebSockets, PostgreSQL, Supabase, Docker, Groq API, OpenAI API

Designer of Dual-Mode FastAPI Backend — Matrix-core-ai (Personal Project)

- Designed a dual-mode FastAPI backend combining a conversational LLM (OpenRouter) with a custom Planner → Simulator → Evaluator decision engine.
- Built API-key-based authorization and per-user session management for conversation state.

Tech: Python, FastAPI, OpenRouter API, REST APIs, Session Management

Backend Developer — Fuel-cost-route-optimizer (Personal Project)

- Developed a Django REST Framework API that calculates optimized travel routes and fuel costs from coordinate inputs, with automatic fuel-stop detection at fixed-distance intervals.
- Modeled route data with GeoJSON storage and exposed aggregate-statistics endpoints; made deployment-ready with Unicorn.

Tech: Python, Django, Django REST Framework, GeoJSON, Unicorn, PostgreSQL

Document Structure Engine Developer — Doc-structure-engine (Personal Project)

- Built a Python engine converting PDF, DOCX, JSON, CSV, and HTML input into structured Markdown with auto-generated tables of contents, tables, and Mermaid diagrams.

- Achieved 95% structure-detection accuracy at under 5 seconds per 100 pages.
■ *Tech: Python, PDF/DOCX Parsing, Markdown Generation, Data Structures & Algorithms*
